DYNAMIC PRINT GENERATOR

Stop using hard to use, time consuming, and expensive methods that deliver poor results. Create your next Online content (publications, magazines, annual, brochures, product catalog, etc.), or other printed/digital materials with the Dynamic Print Generator! it streamlines the process and prevents you from the inefficient and complicated process of using complicated PDF software or having to work with a Graphic Designer to manually typeset a document. Say goodbye to Converters, Editors, and PDF Creators!

HOW DOES IT WORK?

The Dynamic Print Generator can be used to create a real-time PDF document based on your dynamic CMS content. Print documents can be generated straight from your website. The CMS Admin Page Editor is powerful, intuitive, and easy to learn.

With our DPG you get a website and PDF at the same time for one price. Our proprietary ASP.NET Content Management System (CMS) stores your content and allows you to edit your website and print the document online.

The Print matches what you see on the website, and both are driven by the same CMS content. Print Generator renders the PDF based on CSS, a modern "web standard", which enables us to fully customize the formatting of the PDF output. Other Web Page to Print tools sloppily place your content onto the PDF or merely take screen captures of the page. Our tool is able to combine your up to date content and apply precise formatting via CSS to create a typeset highresolution PDF, which you can provide to your printing service or print yourself.

SUTTON INTEGRATED SOLUTIONS
CONTENT MANAGEMENT SYSTEM (CMS)

Dynamic Print Generator for online reports, Annuals, Brochures, Publications, Magazines, Fact sheets, Catalogs, etc.

TT has developed an industry-leading CMS built to enable businesses and organizations of all sizes to take control of publishing their content while meeting regulatory compliance standards. TT is delivering this CMS to our clients to enable them to use TT's 'best in class' solution, designed to position our client's as leader's in their industry. Adding to our CMS, we have built a new technology called the Dynamic Print Generator. This allows us to build online content using our CMS, and subsequently produce a hi-res PDF of that online report which is fully printable. This would mean no more choosing an online version over a printed version or vice versa; you can get both for virtually the same price. This also reduces large expensive print runs, with our DPG, you can now control what you print and customize, share pages of content online all directly from your website.

Our Content Management System (CMS)

The TT CMS (built in ASP.NET) provides an excellent base to build online content as well as any size website for public or private companies. Our mandate is to continually make our CMS the best in class and to research better and faster ways in which we can improve our clients set of tools while we maintain our market leadership. Designed and optimized for rapid development, the CMS currently features tools designed to meet the needs of businesses and organizations that require some degree of hybrid offline and online publishing requirements. We have already developed and delivered tools which enable users a greater degree of choice and flexibility in the way that users choose to engage with the content. TT would enable these tools to, amongst other things, allow users to 'pick and pack' specific pages of interest, to download and merge pages on-the-fly for print/PDF for offline reading.

DYNAMIC PRINT GENERATOR

ADAPTIVE OR RESPONSIVE DESIGN (MOBILE / TABLET)

Again utilizing CSS and contemporary web design standards, the website would be designed using 'adaptive' or 'responsive' layouts. TT will create optimum design solutions for the range of device types that will be used to view the website and publications. For instance, rather than simply scaling the pages to fit, the type sizes and number of columns used for a desktop browser will be adjusted automatically to an appropriate size and grid for hand-held mobile or tablet devices.

HTML5, JavaScript / jQuery and CSS3 will provide a robust tool set that can be leveraged to realize the value of rich content (contemporary, efficient, dynamic and visually engaging). Further, by avoiding Adobe Flash, we can build rich, dynamic presentation methods to tie directly into the standard controls of a CMS, ensuring better reach and usability for internal stakeholders to take greater control over the rich content. The goal is to promote greater timelines and shorter implementation times for marketing and communication opportunities.

Our CMS has the ability to make any change necessary and has been set up using a MS Word interface so you can easily make any changes to content, add or delete pages or sections, add and crop photos, add video or PowerPoint and insert charts or graphs with ease. Our CMS also includes our proprietary Data Visualizer, which can be used for showing in a chart, graph or table format any financial data or any comparison related data of any kind.

Renew Sinai Health

Hospitals are the intersection of research, healing and wellness. Leading the next frontier of health care means having modern facilities ready to embrace innovation, best practices and 21st century thinking. Renew Sinai is transforming our environment so that our staff can provide the best experience for the thousands of patients and families who walk through our doors each day.

Transforming our facilities for better patient outcomes

We have set our sights on the next phase of redeveloping Mount Sinai Hospital, Joseph and Wolf Lebovic Health Complex, underscoring our commitment to redefining the future of health care for Toronto and the province.

Over the past several years, Mount Sinai Hospital has grown our capacity to care by opening state-of-the art spaces for patients in our Frances Bloomberg Centre for Women's and Infants' Health program and General Internal Medicine. This year we began preparation for the next phase of renovation and expansion. This ambitious plan will:

Bring state-of-the-art surgical facilities to our patients
Sinai Health System is renowned for its surgical excellence, caring for more than 16,000 patients each year with cancer, inflammatory bowel disease and joint disease. The new space will be a unified and technologically advanced surgical floor designed to help patients recover faster.

Meet the GTA's surging need for emergency medicine
Provincially recognized for low wait times, our emergency department sees 65,000 patients each year – 100% more than our space was designed to accommodate. We are recreating and doubling the size of the Schwartz/Reisman Emergency Centre to meet the demand of Toronto's intensifying population.

Help our most critically ill patients recover faster
The physicians and nurses who work in our Intensive Care Unit (ICU) are industry leaders and award winners, but our clinical space is outdated. For our most critically ill patients, we are relocating the ICU, increasing the number of beds, improving comfort for patients and visitors and helping to prevent complications.

In conjunction with the renewal of these clinical areas, this project will also see the upgrade of key infrastructure elements within the hospital to support the renovated areas and to meet today's standards and codes.
